Humsafar — QA Results: Phase 1

Task 2.9 · v1.0 · Based on the 1.13 QA Checklist Template · Tester: Syed Sarim Jawad Zaidi

Verdict: the Phase 1 backend (Auth, KYC, Linkage, Permissions) passes every functional and security check that can be run without the app. **0 failures, 0 product bugs.** Accessibility checks are BLOCKED until the app screens are tested on a device (Task 3.16).

1. Test run details

Field	Value
Phase / checkpoint	Phase 1 (ICP-1 scope). Full collection also covers Phases 2–4 as a regression run
Features under test	Register / login / tokens, Guardian verification, Dependent KYC, linkage, Secondary invites, permission dashboard (FR-A1 – A4, FR-B1, FR-B2)
Build tested	dev branch, commit 3568d73 (after PR #35, Task 4.4 calls). Database migrated to 0011
Environment	Backend run locally on the tester's laptop: http://127.0.0.1:8000, PostgreSQL 18, SCHEDULER_ENABLED=true
Tool	Postman Collection Runner · "Humsafar API - Phase 1-4" from backend/postman/ · environment Humsafar-Local
Device(s)	None. Backend-only run; the Flutter app was not part of this pass
Tester	Syed Sarim Jawad Zaidi
Date	20/10/2026 (run started 02:11:24 PM, duration 6 min 14 s)
Related documents	SRS v1.0 §4.1 · SDS v1.0 §11.3, §17 · docs/api/ auth, kyc, linkage, permissions contracts · 1.13 template

2. Collection run summary

Each request has automatic checks (assertions). Red 4xx codes in the run are deliberate "should be refused" tests; they count as passed when the backend refuses correctly.

Folder	Phase	Requests	Checks	Passed	Failed
1 - Auth (Task 1.3)	Phase 1	9	21	21	0
2 - KYC (Task 1.4)	Phase 1	13	25	25	0
3 - Linkage (Task 1.5)	Phase 1	23	36	36	0
4 - Permissions (Task 1.6)	Phase 1	23	37	37	0
5 - Location (Task 2.1)	Phase 2	28	44	44	0
6 - Geofences (Task 2.2)	Phase 2	32	49	49	0
7 - Device health (Task 2.3)	Phase 2	27	40	40	0

Folder	Phase	Requests	Checks	Passed	Failed
8 - Notifications (Task 3.1)	Phase 3	29	45	45	0
9 - Medication (Task 3.2)	Phase 3	37	58	58	0
10 - Missed dose (Task 3.3)	Phase 3	31	45	45	0
11 - Wellness check (Task 3.4)	Phase 3	35	53	53	0
12 - Escalation chain (Task 3.5)	Phase 3	21	29	29	0
13 - Panic Mode (Task 3.6)	Phase 3	30	48	48	0
14 - Remote alarm (Task 3.7)	Phase 3	31	48	48	0
15 - Emergency contact (Task 3.8)	Phase 3	30	44	44	0
16 - Messaging (Task 4.2)	Phase 4	32	46	46	0
17 - Voice messages (Task 4.3)	Phase 4	28	43	43	0
18 - Calls (Task 4.4)	Phase 4	37	59	59	0
Total		**496**	**770**	**770**	**0**

Average response time 123 ms. Backend log showed no 500 errors and no tracebacks; the last request (Calls 36, no token) returned the expected 401.

3. Section A — Functional correctness (Phase 1)

ID	Req.	What to check (steps)	Expected result	Result	Notes / Bug ID
F-01	FR-A1	Register a Guardian with valid details (Auth: Register guardian)	201; guardian_role = primary; full_name returned; no password in the reply	**PASS**	4/4 checks
F-02	FR-A1	Register again with the same email (Register duplicate)	409 with the standard error envelope	**PASS**	
F-03	FR-A1	Register with a bad email, 2-digit phone, short password and role "admin" (Register invalid)	422 VALIDATION_ERROR, nothing saved	**PASS**	
F-04	FR-A1	Log in, read /auth/me, refresh the token; refresh using an access token instead	200 + tokens; /me works; refresh works; access token refused for refresh (401)	**PASS**	
F-05	FR-A3	Guardian verification: status before; wrong OTP; correct OTP; CNIC check	Not verified at first; wrong OTP 400; correct OTP and CNIC verify the Guardian	**PASS**	KYC 1–7
F-06	FR-A2	Dependent registers, tries to log in before KYC; KYC with failing liveness photo; wrong password; then a passing KYC; KYC again	Login blocked (403) until KYC passes; failing photo = failed; wrong password 401; pass = verified; repeat = 409	**PASS**	KYC 8–13

ID	Req.	What to check (steps)	Expected result	Result	Notes / Bug ID
F-07	FR-B1	Primary links a Dependent before verifying, after verifying, and links again	403 before verification; 201 after; repeat = 409 ALREADY_LINKED	PASS	Linkage 1–7
F-08	FR-A1, FR-B1	A second Guardian tries to become a second Primary of the same Dependent	409: only one Primary per Dependent	PASS	
F-09	FR-A1, FR-B2	Invite Secondary #1 and #2; reuse an invite with another phone; Secondary tries to invite; invite a 4th Guardian	Invites work; reused invite 403; Secondary cannot invite (403); 4th Guardian 409 (cap: 1 Primary + 2 Secondary)	PASS	Linkage 12–21
F-10	FR-A2, FR-B1	Dependent completes KYC after being linked, then logs in	Account activates only when verified AND linked; login then works	PASS	Linkage 22–23
F-11	FR-A4	Primary dashboard and Secondary's own view on a new link	Default deny: Secondary has no modules; Primary has all	PASS	Permissions 10–12
F-12	FR-A4	Secondary tries to grant itself; Primary grants live_location and camera_viewing, then revokes live_location	Self-grant 403; Secondary sees each change; dashboard reflects it	PASS	Permissions 13–19
F-13	FR-A4	Delegate remote alarm; use an unknown module; restrict the Primary	422 (alarm not delegable); 422 (unknown module); 400 (Primary cannot be restricted)	PASS	Permissions 20–22

4. Section B — Accessibility

Not testable in this run: no app build was used. Moved to Task 3.16 (accessibility audit on a device).

ID	Req.	What to check (steps)	Expected result	Result	Notes / Bug ID
A-01	NFR-07	Count taps from Dependent Home to Panic / Wellness / medicine	Within 2 taps	BLOCKED	No app build in this run
A-02	FR-P1	Dependent Mode touch target size and spacing	At least 48 × 48 dp	BLOCKED	Same
A-03	FR-P2, NFR-08	Large Text / High Contrast on safety screens	Contrast ≥ 4.5 : 1; nothing cut off	BLOCKED	Same
A-04	FR-P4, NFR-09	Switch to Urdu (EN|UR)	All static text in Urdu; right-to-left layout	BLOCKED	Same
A-05	UI rule	Aa and EN|UR in every app bar	Present	BLOCKED	Same
A-06	NFR-12	Oldest supported Android (API 26)	Works and looks correct	BLOCKED	Same

5. Section C — Security spot-checks

ID	Req.	What to check (steps)	Expected result	Result	Notes / Bug ID
S-01	SDS 11.3	Call protected endpoints without a token (Me without token, and the "No token" case in later folders)	401, no data	PASS	

ID	Req.	What to check (steps)	Expected result	Result	Notes / Bug ID
S-02	SDS 11.3	Expired access token (older than 15 min)	TOKEN_EXPIRED; app refreshes once and retries	BLOCKED	Needs a 15-min wait and the app; backend keeps TOKEN_EXPIRED as its own code (code reading)
S-03	FR-A1	Wrong password, then unknown email	Same message both times	PASS	Wrong password tested (401). Unknown email: same "Incorrect email or password." by code reading, not by a request
S-04	FR-A4	Secondary uses a module switched off for them	403	PASS	Backend only (Permissions, Calls 32, Panic 18/27)
S-05	FR-B2	Add a 4th Guardian	Refused	PASS	409 cap
S-06	FR-D2	Panic with a Secondary who has no alert permission	Still reaches every linked Guardian	PASS	Panic 15 and 17
S-07	FR-K1.3	Camera viewing indicator	Shows every time	N/A	Camera not built yet (Phase 6)
S-08	NFR-10	Extra personal data in replies	Only needed data	PASS	Checked "no password in response"; no full field-by-field review
S-09	Repo	Secrets in the repository	No .env, passwords, keys or tokens committed	PASS	Checked tracked files on dev 3568d73
S-10	Input	Wrong formats: email, phone, short password, role	Rejected with a clear message	PASS	422; CNIC format not covered by the collection

6. Bug log and observations

No product bugs found. Two test-setup observations, kept so the next run avoids them:

ID	Type	What happened	Cause	Action
OBS-01	Test setup	Run summary showed Errors 1 and "Collection run didn't finish… at 100%"	An empty "New Request" (no URL) had been saved into the tester's local copy of the collection by accident. Not in the repo file	Delete the empty request in Postman. No product bug
OBS-02	Test setup	First run: every request "could not be sent"	A hand-made environment had no base_url	Added base_url = http://127.0.0.1:8000. Next time import backend/postman/Humsafar_Local.postman_environment.json

7. Summary and sign-off

Section	Checks	Pass	Fail	Blocked	N/A
A — Functional	13	13	0	0	0
B — Accessibility	6	0	0	6	0
C — Security	10	8	0	1	1
Total	**29**	**21**	**0**	**7**	**1**

Decision	Details
Open Critical / High bugs	None
Verdict	*[x] Backend ready for the Phase 1 checkpoint [ ] Ready after listed fixes [ ] Not ready. App-side checks (Section B, S-02) to be done on a device*
Follow-ups	Run Section B in Task 3.16 · Test S-02 (expired token refresh) in the app · Add a CNIC-format case to the collection (optional, Abdullah)
Tester	Syed Sarim Jawad Zaidi · 20/10/2026
Confirmed by team	*[Abdullah · Talha · date]*
