1. Summary

1.8 fixes what it promised. All six reported items are verified (G-01, N-01, G-02, F-03, F-05, F-09), the visit-request checks D-09 to D-16 now run and pass, the KYC resume and the bottom sheets work. **One FAIL:** a back swipe on the signed-in Guardian Home still closes the app without asking (F-19, Low). A-05 waits for real push (ICP-3 F-16, backend). D-12, D-14 and D-17 were not run (no network drop possible; Sara has no health_records).

Updates the earlier reports: ICP-1 v1.1 (F-03, F-05, F-09 now Verified), 3.16 v1.0 (A-04 PASS, N-01 Verified, A-05 still blocked), 6.12 v1.0 (G-01, G-02 Verified; D-09–D-11, D-13, D-16 PASS). Still open from those reports and not part of 1.8: ICP-1 F-07 (app opens on the developer shortcut) and F-08 (app icon); 3.16 N-02–N-14 (Talha's 7.5 pass); 6.12 G-03 (emergency numbers not grouped) and G-04 (Activity-log filters).

3. Findings

Found on **debug-apk-1.8**. Owner: Frontend (Talha).

ID	Finding	Sev.	Check	Fix / owner	Status
F-19	Signed in, a back swipe on the Guardian Home closes the app without "Exit the app?". The 1.8 note says back always ends on the role-select screen with the question; that holds for the preview screens only	Low	1.8-b	Frontend (Talha): wrap the signed-in Home screens in the same exit confirmation, or update the note	Open
N-15	A medicine can only be switched off, not deleted (the backend has DELETE, 204)	Low	A-04	Frontend (Talha): delete action on the medicine (with confirm)	Open

3.1 F-19: steps to reproduce

- Sign in as a Guardian (Ali) on a phone with gesture navigation; stay on Home.
- Swipe back from the screen edge. **Actual:** the app closes at once. **Expected (1.8 note):** "Exit the app?" first.
