HUMSAFAR · DESIGN

Design History: from Wireframes to the Current Screens

v1.0 · prepared by Syed Sarim Jawad Zaidi (UI/UX) · 9 Nov 2026 · Tasks 0.7, 1.12, 2.8, 3.9, 4.9, 5.9, 6.11

1. Why this document

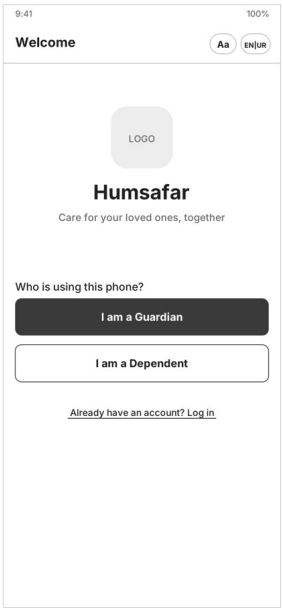

The team repo keeps only the current screens. The earlier versions (82 screen versions, the Figma archive of 68 old frames, brand concepts and sources) were moved out of the repo on 8 Nov 2026 and are kept in Sarim's private studio repo and in the git history of the team repo. **This document keeps the design process visible**: how the screens grew from low-fidelity wireframes to hi-fi mockups, and why each round changed them.

2. Timeline

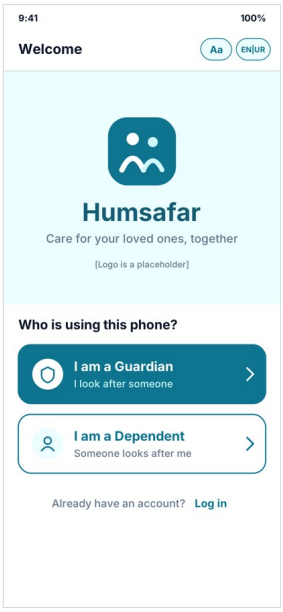

Date	Step
19 Oct	**Wireframes v0.1** (Task 0.7): 24 low-fidelity screens in grey, layout and flow only. **Hi-fi v0.1** of Identity & Access (1.12) and the style guide; calm teal-blue chosen, red only for Panic and critical alerts.
20 – 22 Oct	Hi-fi screens for map (2.8), safety (3.9), communication (4.9), records / vitals / band (5.9) and directory / camera (6.11); each set re-matched to Abdullah's API contract as soon as it was merged (new versions v0.2 / v0.3).
21 Oct	**Style guide v0.2** after the NFR-08 contrast check: danger red #DC2626 → #B91C1C, muted grey #64748B → #475569, so all text meets WCAG AA.
23 Oct	**Design handoff v1.0** for Talha (tokens, screen → app map); wireframes marked superseded.
24 Oct	**Brand v1.0**: two-companions "H" symbol, wordmark, Urdu slogan, Android app icon.
30 Oct	**47 screens moved to the v0.2 colours** (new versions, layout unchanged); editable SVG sources of all screens; Figma screens replaced with editable layers.
8 Nov	**Splash and launch v0.1** with a start-up animation (Figma prototype). Old versions moved to the studio repo.

3. Four screens, step by step

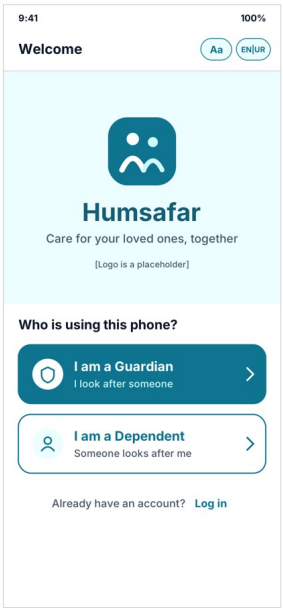

01 Welcome (Identity & Access)

Wireframe v0.1

Hi-fi v0.1

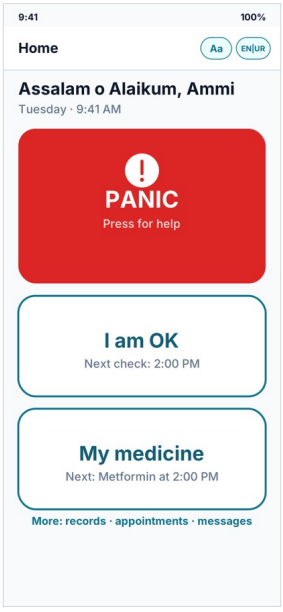

Hi-fi v0.2 (current)

- Wireframe → hi-fi: the role choice became two large cards (Guardian / Dependent) with the teal style; **Aa** (large text) and **EN|UR** stay in every app bar.
- v0.2: colours only (style guide v0.2). The logo area is still the early placeholder; the app builds with the brand v1 files.

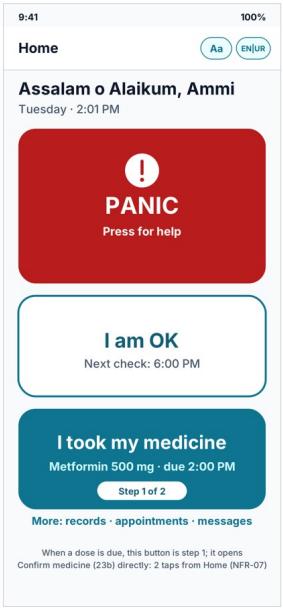

20 Dependent Home

Wireframe v0.1

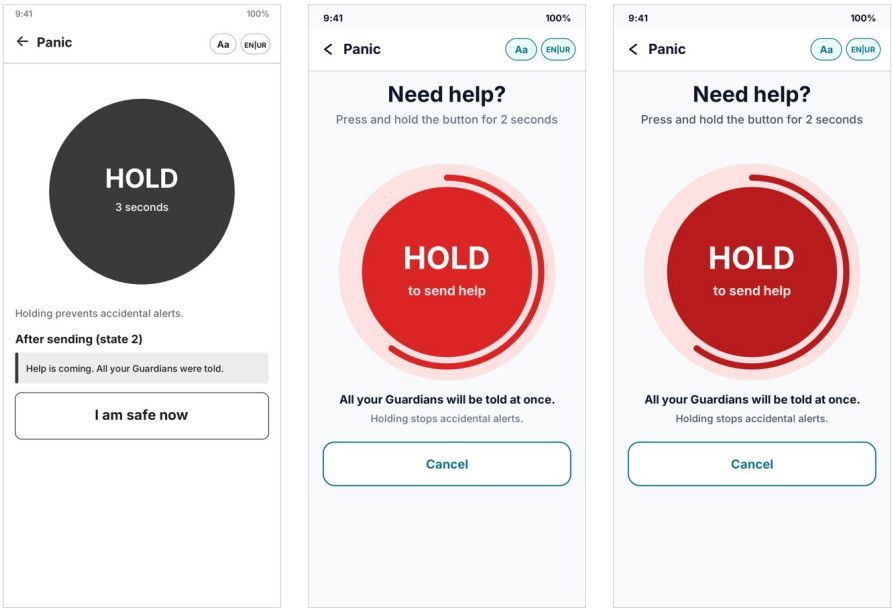

Hi-fi v0.1

Hi-fi v0.2 (current)

- The wireframe's idea stayed: three big safety buttons (Panic, I am OK, My medicine) reachable in two taps (NFR-07).
- v0.2: when a dose is due, "My medicine" turns into "I took my medicine" (step 1 of 2, confirmed in 2 taps from Home), plus the v0.2 colours.

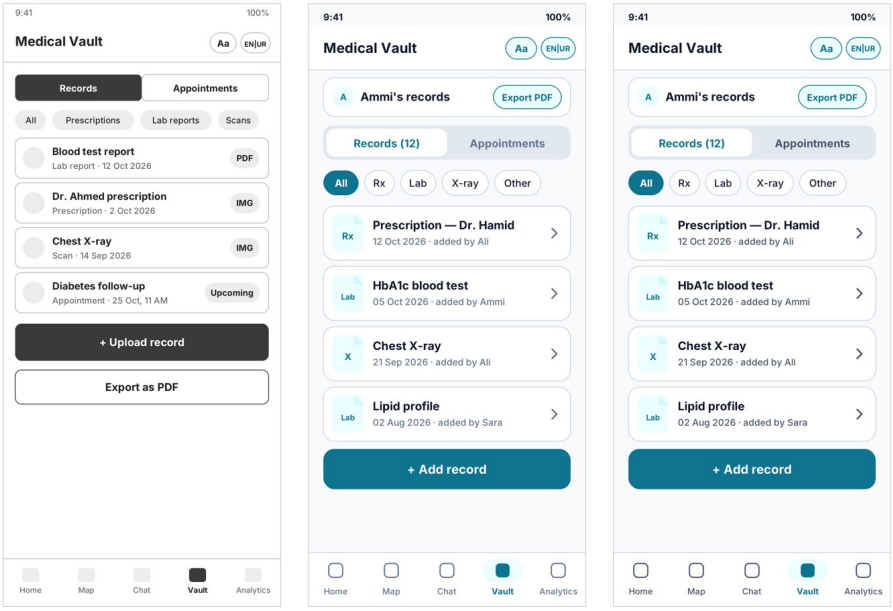

21 Panic

Wireframe v0.1 | Hi-fi v0.1 | Hi-fi v0.2 (current)

- Wireframe: "HOLD 3 seconds". Hi-fi: **hold 2 seconds** with a progress ring, "to send help", a clear Cancel, and the note that all Guardians are told at once; holding stops accidental alerts.
- v0.2: the red became #B91C1C so the white text passes contrast (NFR-08).

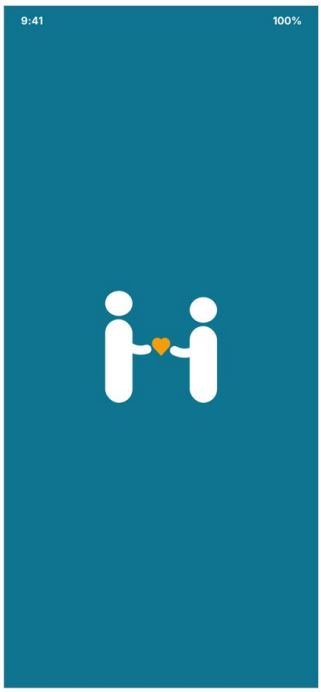

15 Medical Vault

Wireframe v0.1 | Hi-fi v0.2 | Hi-fi v0.3 (current)

- Hi-fi matched records_contract.md: four categories (Prescription, Lab, X-ray, Other) instead of the wireframe's three, **"added by"** on each record, Export PDF at the top, record count on the tab.
- v0.3: colours only.

4. Newest: splash and launch (8 Nov)

00 Splash v0.1

00b Launch v0.1

Built from the brand v1 files: Android system splash (symbol on teal) and the first app screen (symbol, wordmark, loader), with a 0.6 s animation between them. Never waits for the internet, so PANIC is reachable within seconds. Will be redone with the logo v2.

5. Where every version is kept

- **Current screens:** team repo docs/design/<task>/ (PNG + svg/), Figma page *02 · App Designs (Hi-Fi)*.
- **All earlier versions, wireframe sources, brand concepts and .ai masters, Figma backup:** Sarim's private studio repo humsafar-sarim-studio (view access on request) and the team repo's git history before PR #103.
