HUMSAFAR · QA

ICP-3 Safety Loop: Results (split run)

v1.0 · prepared by Syed Sarim Jawad Zaidi (QA) · run 4 Nov 2026, 01:15–01:50 PKT · Ali on debug-apk-1.8 (Phone B) · Ammi played through the server by Abdullah · hosted backend

2	2	2	5
passed	partial	failed (set-up)	to do Thursday

1. Summary

ICP-3 checks the safety loop: Panic, the wellness check, missed medicine, the escalation chain to the emergency contact, and the remote alarm. Talha could not join, so this was a **split run**: Abdullah played Ammi through the server and Sarim watched everything on Ali's phone. Steps that need Ammi's own phone are marked **To do** for the 15-minute Thursday session, not PASS.

Result so far: 2 PASS, 2 partial, 2 FAIL, 5 to do, 1 skipped. ICP-3 is not closed yet. The timing of the chain was right every time: Panic 1:20 → seen 1:21; wellness 1:25 + 5 min grace → alert 1:30 → emergency contact 1:32; dose 1:40 → missed 1:41 → emergency contact 1:43; dose 1:45 → missed 1:46 → emergency contact 1:48.

Why step 7 failed: Ammi had **no emergency contact** saved, so no SMS was sent and the server correctly told Ali with a critical notice. This is a set-up miss, not a server bug. It also exposed **F-10 (High)**: the app shows the same "Emergency contact alert" whether the SMS was sent, failed or there is no contact, so a Guardian cannot know that nobody outside the app was told.

2. Set-up

Item	Detail
Build	Ali: debug-apk-1.8 on Sarim's phone (Phone B). Ammi: no phone; Abdullah acted as Ammi through the server.
Server timers	Set by Abdullah for the run, put back to normal afterwards: MEDICATION_WINDOW_S=60, ESCALATION_PRIMARY/SECONDARY_TIMEOUT_S=60, WELLNESS_ACTIVITY_WINDOW_S=0.
Schedule (made by Abdullah)	Wellness check 1:25 AM, grace 5 min; medicine doses 1:40 AM and 1:45 AM. Seen in Ali's app before T0 (all three correct).
Emergency contact	**Not set** (Ali's Emergency settings: name and phone empty, S9).
Not checked in this run	Sara and Bilal (second accounts), the Render log (MOCK SMS lines: log not captured), anything on Ammi's phone.
Script	docs/qa/Humsafar_QA_3.17_Escalation_Test_Cases_v1.0.pdf (ICP-3 live script, 12 steps).

3. Results by step

#	Step	Expected	Result	What Ali's phone showed	Shot
1	Ali's Home: no open alerts; emergency contact set	Nothing open; Uncle Hamid · 0300 1110009 saved on Ammi	FAIL	Old alerts cleared before T0 (one new "Phone offline" at 1:18 AM, expected in a split run, acknowledged). **Emergency contact was empty** (set-up miss, not a bug): it was not added at T−5	S1, S9
2	Ammi holds PANIC 2 s (Abdullah, server)	Ali, Sara and Bilal all get PANIC at once	Partial	Ali: red "Panic alert" at **1:20 AM**, Level 1 · Primary. Sara and Bilal not checked (no second account in this run)	S2
3	Ammi presses Panic twice quickly	Still one panic	To do	Needs Ammi's phone (Thursday session)	—
4	Ali taps "I've seen it" within 1 minute	Alert moves to Seen; no SMS	PASS	Tapped at **1:21 AM**; moved to Seen. No emergency-contact alert followed the Panic, so the chain stopped. Ammi's "A Guardian has seen it" needs her phone (Thursday)	S2, S6
5	Ammi: "I am safe now"	All-clear to everyone	To do	Needs Ammi's phone. The all-clear is a standard notice and the Alerts screen lists critical alerts only, so it cannot be seen there	—
6	Wellness check (1:25 AM, grace 5 min); Ammi does not answer	Ali alerted (level 1) about 5–6 min after the check	PASS	"Wellness check missed" at **1:30 AM**, Level 1 · Primary. Left unopened	S4, S5
7	Nobody opens it; wait about 2 min	Sara alerted (level 2), then ONE mock SMS; Ali sees "Emergency contact messaged"	FAIL	At **1:32 AM** Ali got a **critical** "Emergency contact alert". By the contract a critical one means **no contact set** (or SMS failed); a sent SMS is a standard notice. Matches step 1: no SMS went out. Server behaved as specified. Render log: **log not captured**. Sara's level 2 not checked	S5, S9
8	Ammi answers late: "Yes, I am OK"	Alert closes; all-clear + all-clear SMS	To do	Needs Ammi's phone. The 1:30 AM wellness alert is still open on Ali	—
9	Dose 1 (1:40 AM): "I took it" → "Yes, confirm"	Dose = taken; no alert	To do	Not confirmed (needs Ammi's phone), so Ali got **"Missed dose" at 1:41 AM** (Level 1) and an emergency-contact alert at **1:43 AM**. Shows the missed-dose path works	S4, S5
10	Dose 2 (1:45 AM): Ammi ignores it	Missed-dose alert to Ali with "Give more time" / "Tell other Guardians"	Partial	"Missed dose" at **1:46 AM**, Level 1 · Primary; emergency-contact alert at **1:48 AM**. The two buttons inside the alert were not opened (check Thursday)	S4
11	Ali: Remote Alarm → Ring, then Stop	Ammi's phone rings even on silent; Stop works	To do	Not run (needs Ammi's phone). Ali's Emergency settings shows "Ring alarm (60 s)", Primary only	S9
12	Sara tries Remote Alarm	403	Skipped	Covered by ICP-1 step 21	—

Pass rule (script): steps 2, 4, 6, 7, 8, 9 must pass, Panic must reach every Guardian, and no Critical / High bug open. Now: 4 and 6 PASS, 2 partial, 7 FAIL (set-up), 8 and 9 to do; F-10 (High) open.

4. Findings

Codes continue the ICP series (F-01–F-09 are in the ICP-1 results). Found on **debug-apk-1.8**. Severity: **High** blocks or hides a core safety flow; **Low** minor.

ID	Finding	Sev.	Step	Fix / owner	Status
F-10	Every emergency-contact notice is titled "Emergency contact alert", whatever happened. The server sends a different result (sent = standard "Emergency contact messaged"; no_contact = critical "No emergency contact set"; failed = critical "Emergency contact could not be reached", emergency_contact_contract.md), but the app maps only the type (alertTypeExternalContact in notification_display.dart). On 4 Nov no SMS went out (no contact set) and Ali could not tell	High	7	Frontend (Talha): show the server's title, or map data.result to three texts (EN + UR)	Open
F-11	The Alerts list shows only the time, no date. Alerts from earlier days (4:16 PM, 10:51 PM, 12:13 AM…) look like today's in the Seen tab	Low	—	Frontend (Talha): add the date for alerts not from today	Open

4.1 F-10: steps to reproduce

- **Set-up:** a Dependent with **no** emergency contact; short timers (or wait 10 min with the normal ones).
- **Steps:** let a wellness check or a dose go unanswered; nobody opens the alert; it climbs to the emergency-contact level.
- **Actual:** Ali gets a critical "Emergency contact alert" (1:32, 1:43, 1:48 AM on 4 Nov), the same text as when an SMS is sent.
- **Expected:** "No emergency contact set" (or "Emergency contact could not be reached"), so the Guardian knows to act; "Emergency contact messaged" only when the SMS went out.

4.2 Seen again (already reported)

- **3.16 N-07:** the alerts do not say which Dependent they are about (Ali has Ammi and Nani).

4.3 Notes for Abdullah (backend, not findings)

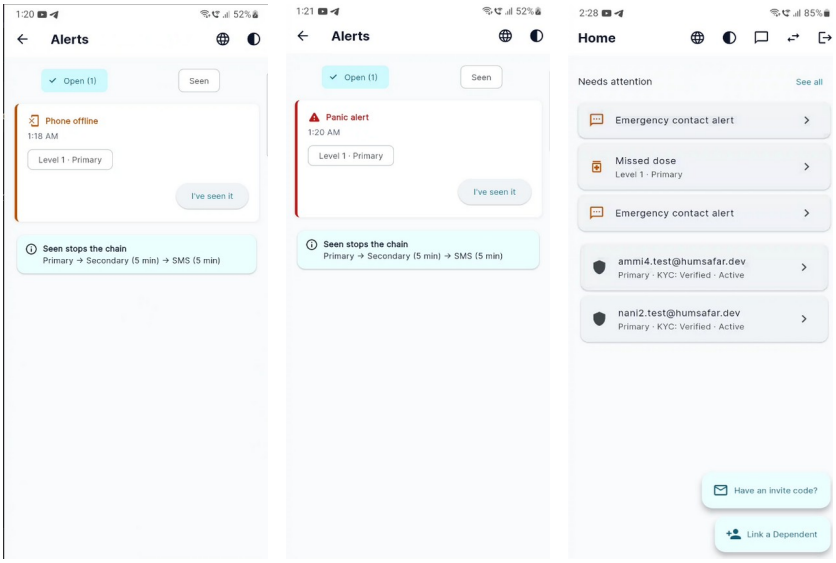

- Ali got **three** "no contact" notices, one per climbing alert (1:32, 1:43, 1:48). The contract says "Primary gets ONE critical"; please confirm that "one" means one per alert.
- The info box "Primary → Secondary (5 min) → SMS (5 min)" is fixed text; it is right for the normal timers, so not a finding.

5. Thursday session (15 min, Talha as Ammi)

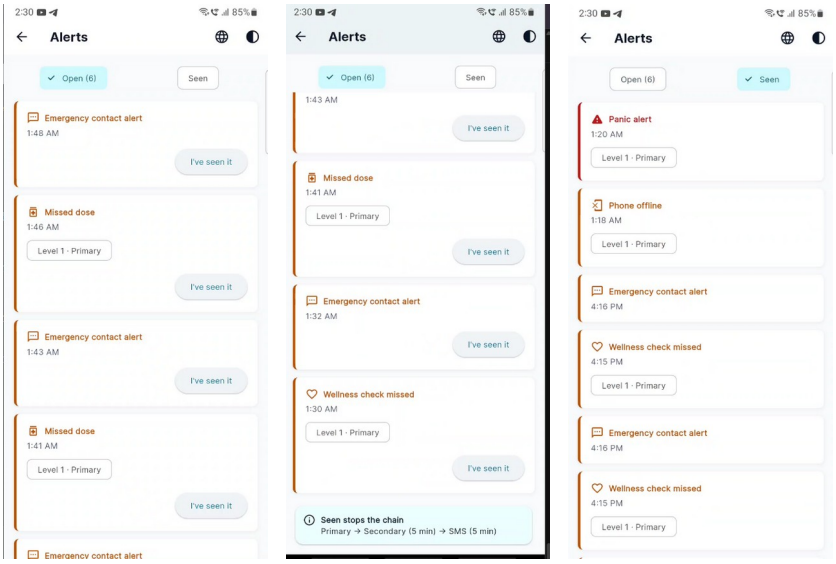

Before	Detail
Sarim (Ali)	Save the emergency contact Uncle Hamid · 0300 1110009 on Ammi; tap "I've seen it" on the 6 open alerts from 4 Nov so Home is clean.
Abdullah	Set the four timers again (10 min before), new wellness and dose times; reset afterwards.

Steps to run: 3, 4 (Ammi side), 5, 7 (with the contact set: expect a standard "Emergency contact messaged" that does not appear in the Alerts list), 8, 9, 10 (open the alert, check both buttons), 11. Then ICP-3 gets its verdict in v1.1.

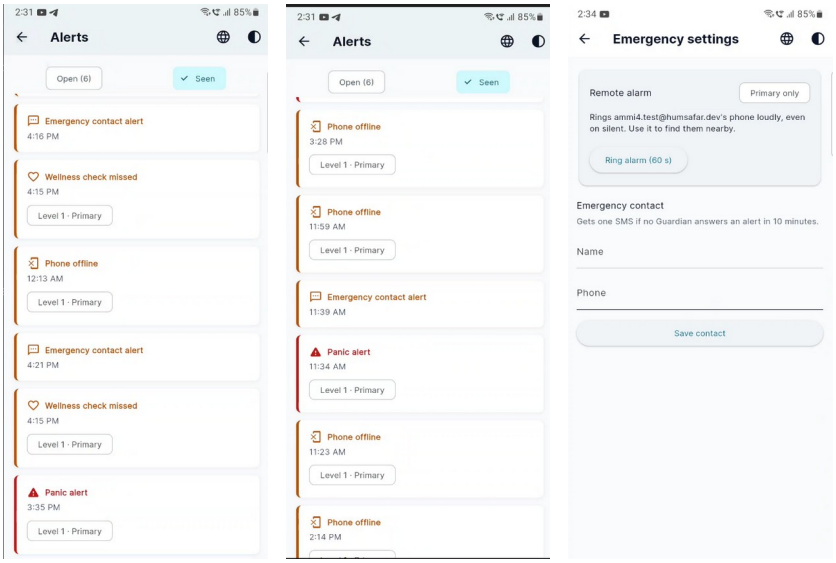

6. Screenshots (Ali's phone)

S1 Phone offline 1:18 AM · S2 Panic 1:20 AM · S3 Home after the run

S4 Open alerts (1) · S5 Open alerts (2) · S6 Seen tab

S7 Seen (older) · S8 Seen (older) · S9 Emergency settings: no contact
