HUMSAFAR

Design Handoff for Integration

v1.0 · Design owner: Syed Sarim Jawad Zaidi · For: Muhammad Talha Khan (Flutter app) · Checked against dev (PR #81) and the app repo main (5591848)

This is the one document Talha needs from the design side for the integration step. It collects the theme (colours, type, sizes), the rules every screen follows, the exact list of designed screens mapped to the app's screen files, what still differs, and what is designed but not built yet. Everything is checked against the current files, not memory.

1. What to follow, in this order

#	Source	Use it for
1	Design tokens (section 2 and humsafar_design_tokens.dart)	Every colour, font size, radius and height. Tokens win over any PNG.
2	Latest hi-fi screen (Figma page 02 · App Designs, or the PNG with the highest version in docs/design/)	Layout, content, order of elements, states
3	The folder README next to the screen	Which API contract and requirement the screen follows, and design notes
4	Wireframes (0.7)	Do NOT build from them. They are greyscale, early (v0.1) and superseded by the hi-fi screens

1.1 Things that could mislead you (found in this check)

- **Wireframes look different from Figma's hi-fi screens — that is expected.** The 24 wireframes were the first greyscale sketch. The hi-fi screens in Figma are the final design. If the wireframes on Figma page 01 were edited after export, it makes no difference: neither is used for building.
- **47 of the 68 PNGs still show the old red #DC2626 or old grey #64748B somewhere.** They were drawn before the contrast fix (NFR-08). Use the v0.2 tokens: red **#B91C1C**, grey **#475569**. Layouts are unchanged; only these two shades moved.
- **Five overview images were out of date** (1.12, 3.9, 5.9, 6.11 and Coverage showed older versions). They are replaced in this handoff by new overviews built from the latest screens (section 7).
- **Some screen names in Figma and the repo are frame numbers, not routes.** Section 4 maps each number to the app's screen file.

2. Design tokens (style guide v0.2)

2.1 Colours

Token	Hex	Use	Replaces in the app today
primary	#0E7490	Primary buttons, links, active tab, app-bar pills, progress	Theme seed green 0xFF2E7D32; Colors.teal (11×)
primaryDark	#155E75	Pressed state, outline-button text on big Dependent buttons	Colors.teal.shade700 / 800
primaryTint	#ECFEFF	Aa / EN|UR pill fill, info cards	Colors.teal.shade50, teal.withValues(0.1)
primarySoft	#CFFAFE	Subtitle on a primary button, light highlight	Colors.teal.shade100
background	#F8FAFC	Page background	default scaffold colour
surface	#FFFFFF	Cards, app bar, input fields	—
text	#0F172A	Main text	Colors.black
muted	#475569	Secondary text, captions, unselected tabs	Colors.grey.shade600 / 700, Colors.grey
border	#CBD5E1	Card and field borders, dividers	Colors.grey.shade200 / 400
tabTrack	#E2E8F0	Background of segmented tabs	—
success / tint	#15803D / #DCFCE7	Verified, inside zone, dose taken	Colors.green, green.shade700
warning / tint	#B45309 / #FEF3C7	Missed dose, left zone, urgent voice, band no data, load errors on Dependent screens	Colors.orange.shade800, amber.shade800 / 900, amber.shade50 / 100
danger / tint	#B91C1C / #FEE2E2	PANIC and critical alerts ONLY	Colors.red, red.shade700 (23×), red.shade100 / 200

Contrast: every text / background pair above passes WCAG AA (4.5 : 1) — see docs/qa/Humsafar_QA_NFR-08_Contrast_Check_v1.0.pdf. White on primary is 5.36 : 1, white on danger 6.47 : 1.

2.2 Type (Inter)

Style	Size / weight	Used for
Title	26 / Bold	Screen greeting, big numbers
Heading	18 / Bold	App-bar title, section titles
Body	15 / Regular	Normal text, field values
Label	13 / SemiBold	Field labels, chips
Caption	12 / Regular, muted	Helper text, timestamps
Button	16 / Bold	All buttons
Dependent PANIC	30 / ExtraBold, white	Panic button label
Dependent safety buttons	26 / ExtraBold + 15 / Medium subtitle	"I am OK", "My medicine", "Yes, I am OK"

2.3 Font and Urdu

- Latin text: **Inter** (the app has no custom font today; add it with google_fonts or bundle the .ttf files).
- Urdu text: Inter has no Urdu letters, so Android falls back to its system font. For readable Urdu, bundle **Noto Nastaliq Urdu** (or Noto Naskh Arabic if Nastaliq is too tall for buttons) and use it when the locale is ur. Check that layouts flip right-to-left in Urdu during the ICP review.
- Large-text mode (Aa): keep Talha's existing 1.25× scale and high-contrast theme; the sizes above are the standard-mode base.

2.4 Sizes and components

Item	Value
Design frame	360 × 780 (Android, logical pixels)
Page side margin / gap between blocks	20 / 12
App bar	56 high, white, 1 px bottom border, title 18 Bold; Aa pill 40 × 28 and EN|UR pill 44 × 28, radius 14, tint fill with primary outline
Primary button	Full width, 54 high, radius 14, primary fill, white 16 Bold
Secondary button	54 high, radius 14, white fill, 1.6 primary outline, primary text
Text field	50 high, radius 12, 1 px border; focus 2 px primary; error 2 px danger with 12 px helper text

Item	Value
Card	White, radius 14, 1 px border, no shadow
Touch targets	At least 48 × 48
Dependent Home (20)	PANIC 200 high, safety buttons 130 high, radius 22, outline 2.5
Bottom navigation (Guardian)	Home · Map · Chat · Vault · Analytics

2.5 Rules every screen follows

- Aa (large text / high contrast) and EN | UR in every app bar (only the dev role-select screen is exempt).
- Red only for Panic and critical alerts. Warnings and errors on Dependent screens are amber or grey, never red.
- Dependent Mode: every safety action within 2 taps from Home (NFR-07); big buttons, short words.
- Vitals: numbers and units only — never "high", "low", "normal" or traffic-light colours.
- Demo directory entries show "Sample" and their Call button is disabled; charges in PKR or "Ask for price".
- Text contrast at least 4.5 : 1 in both standard and large-text modes.

3. Theme fixes needed in the app

Found by reading the app code on main (5591848). 37 screen / widget files set colours directly instead of using the theme.

#	Where	Now	Change to
1	lib/core/theme/app_theme.dart	seedColor 0xFF2E7D32 (green)	primary #0E7490 + the token theme
2	37 files: Colors.teal / red / grey / orange / amber / green	Material colours, 3 of them below AA	HumsafarColors tokens (table 2.1)
3	Panic button subtitle (Dependent Home)	Colors.white70 on red.shade700 = 3.12 : 1	White or #FEE2E2 on danger #B91C1C (5.30 : 1)
4	Panic button height	160	200 (screen 20)
5	Schedule load error on Dependent Home	Red text	Amber or muted grey (red = Panic only)
6	Panic "help is coming" view	Red background	Calm colours as in 21b v0.2 (red stays on the hold button)
7	Location banner text / outlines	Colors.teal 3.67 : 1	primary #0E7490 (5.36 : 1)
8	Font	System default	Inter (+ Urdu font, 2.3)

The ready-made reference **humsafar_design_tokens.dart** (next to this PDF) holds all tokens and a sample standard theme. It was written from the style guide and not compiled here (no Flutter in this workspace), so Talha should run flutter analyze after bringing it in.

4. Screen map: design → app

68 hi-fi screens (plus the style guide). App file names are under lib/features/. Built = matches the design apart from the theme fixes in section 3.

Design #	Screen	App screen	Status	Note
01	Welcome	splash_screen + role_select (dev only)	Partly done	No real Welcome screen yet; role select is a dev screen
02	Log in	auth/login_screen	Done	
03	Create account	auth/register_screen	Done	
04	Verify identity (KYC)	kyc/dependent_kyc_screen	Done	
05	Share my ID	dependent/share_id_screen	Done	Matches
06	Verify your account	kyc/guardian_verification_screen	Done	
07	Guardian Home	guardian/guardian_home_screen	Partly done	Battery / last active / safe-zone tiles not built (needs a status endpoint)
07b	Switch Dependent	guardian_home_screen (list)	Partly done	Shown as a list, not a switcher
08	Alerts	guardian/alerts_screen	Done	
08b	Missed dose	guardian/missed_dose_screen	Done	
09	Link a Dependent	guardian/link_dependent_screen	Done	Two screens; accepted by design
10	Permissions	permissions_dashboard + invite_secondary + my_access	Done	Shows email until the API returns names
11 / 11b	Live Map	guardian/live_map_screen	Done	
11c	Location history	—	Not started	Backend ready
12 / 12b	Safe zones / Edit safe zone	—	Not started	Backend ready (2.6 scope cut)
13 / 13b	Care schedules / Wellness checks	medication_schedule + wellness_schedule	Done	
14	Emergency settings	guardian/emergency_settings_screen	Done	
15 – 15f	Vault, Add record, Export, Appointments, Record access, Doctor links	records/* (export is a bottom sheet)	Done	
16	Analytics	analytics/analytics_screen	Done	
16b	Summary reports	—	Not started	Backend ready (7.2)
17 / 25	Messages (Guardian / Dependent)	messaging/messages_screen	Done	One shared screen
17b / 17g / 25b	Chat	messaging/chat_screen	Done	
17c / 25c	Urgent voice record / play	voice_recorder_sheet + voice bubble	Done	
17d	Calls (history)	—	Not started	Backend ready (GET /calls)
17e / 25d	Calling / Incoming call	calls/outgoing_call + incoming_call	Done	Call defect open (join object)
17f	In call	calls/call_screen (Zego prebuilt UI)	Partly done	Zego's own call UI
—	Dependent call button (25 / 25b)	—	Not started	Calls are Guardian-only for now
18 / 18b	Directory / Home care	directory/directory_screen (tabs)	Done	
18c / 18d / 18e	Request a visit / Activity log / Visit request	request_visit + activity_log (+ sheet)	Done	
19 / 19c / 19d	Camera	camera/camera_screen	Done	No live video until 6.10
19b	Emergency clips	camera/camera_clips_screen	Done	
20	Dependent Home	dependent/dependent_home_screen	Done	Fixes 3–5 in section 3
21 / 21b	Panic / Help is coming	dependent/panic_screen	Done	Fix 6
22	Wellness check	dependent/wellness_check_screen	Done	
23 / 23b	Medicine time / Confirm	dependent/medication_confirm_screen	Done	
24	Alarm	dependent/alarm_screen	Done	No Call button (no number available)
26 / 26b	Vitals / Add reading	vitals/*	Done	
26c / 27 / 27b	Band not sending / My band / Connect band	wearable/my_band + connect_band	Done	
28	My health (Dependent)	— (Home "More" rows instead)	Partly done	Decide: build the hub or keep the rows
29 / 29b	Camera phone Home / Camera mode	—	Not started	Task 6.10, needs 2nd phone
30 / 32	Settings / My settings	—	Not started	Logout, language, Aa, account
30b / 30c	Close my account / Close Dependent	—	Not started	Backend ready (6.7)

Design #	Screen	App screen	Status	Note
31	Audit log	—	Not started	Backend ready (6.6)

Status colours: green = built, amber = built but differs, grey = not built.

5. Designed and backend-ready, but not in the app

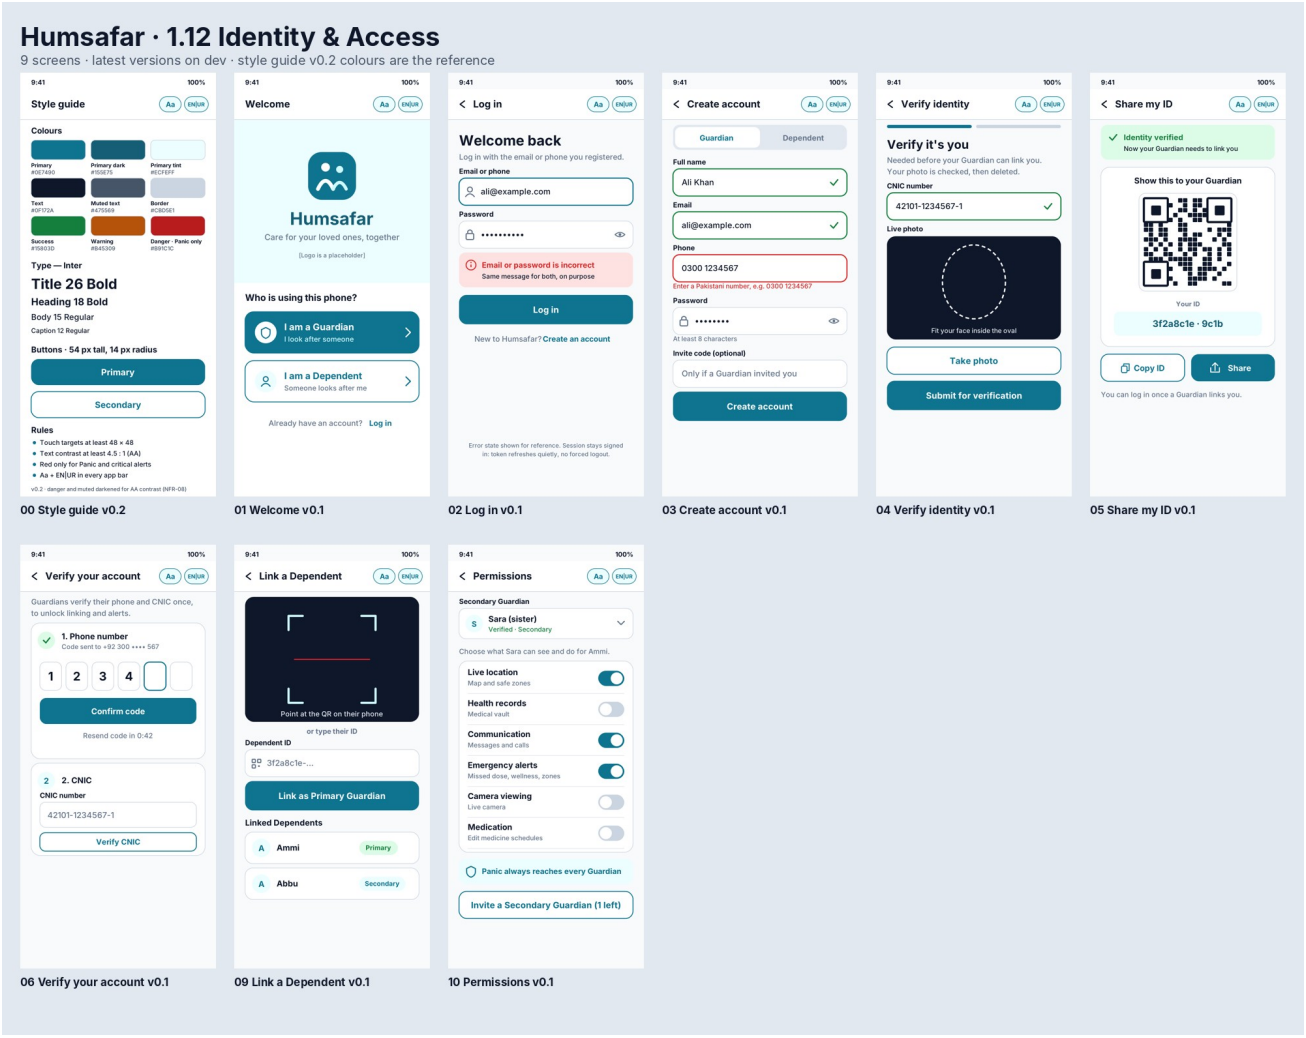

These screens are designed and their API exists on dev, but no roadmap task builds them in the app. The team should decide which ones go into the app before Phase 8 (most are small list screens).

Screens	Backend / contract	Requirement	Suggested priority
12 / 12b Safe zones	geofence_contract.md	FR-C2, C3	High: SRS use case UC-06
31 Audit log	audit_contract.md	FR-N3	High: UC-22
30 / 32 Settings	auth, account	—	High: logout and language for every user
30b / 30c Close account	account_contract.md	FR-O1	Medium
11c Location history	location_contract.md	FR-C4	Medium: UC-05
16b Summary reports	reports_contract.md	FR-Q2 (optional)	Low
17d Calls history	call_contract.md	FR-E2	Low
28 My health	records, vitals	—	Low (Home rows already work)
29 / 29b Camera phone	camera_contract.md	FR-K1	With Task 6.10

6. App screens without their own design

- accept_invite_screen (Secondary accepts an invite), invite_secondary_screen, my_access_screen (Secondary's read-only view): follow screen 10's style — cards with switches, primary button at the bottom.
- Medication / wellness schedule add forms: follow 15b Add record (fields 50 high, Save button at the bottom).
- splash_screen and role_select_screen: role select is dev-only; the release app should open on Welcome (01).

7. All screens at a glance (latest versions)
