HUMSAFAR · QA

ICP-3 Safety Loop: Results

v1.1 · prepared by Syed Sarim Jawad Zaidi (QA) · Run 1: 4 Nov 2026 split run (Ammi via the server, short timers) · Run 2: 7 Nov 2026, 12:04–13:04 PKT, two phones run by Sarim (Ali on his phone, Ammi on a second Android phone, SM-G955F), normal timers · debug-apk-1.8 · hosted backend

8	2	1	1 Critical
passed	partial	failed	open finding

1. Verdict

ICP-3 is NOT passed yet. The safety loop works on the server and in the app screens: Panic (one per double press), "seen" stops the chain and Ammi is told, the unopened Panic reaches Uncle Hamid by SMS after 5 min 39 s, the wellness check and missed dose alerts arrive on time, and "Give more time" works. It fails on delivery: **F-16 (Critical, backend)**, the server sends no real push to any phone, so the Remote Alarm never rings (step 11 FAIL) and a Guardian only sees a Panic while the app is open (step 2 partial). Two High frontend findings are open (F-10, F-13).

Steps: 8 PASS, 2 partial, 1 FAIL, 1 skipped. Pass rule (script): steps 2, 4, 6, 7, 8, 9 pass, Panic reaches every Guardian, no Critical / High open. Now: 4, 6, 7, 9 PASS; 2 and 8 partial; F-16 Critical, F-10 and F-13 High open. **Re-run after the fix:** steps 2 (with the app closed on Ali) and 11 (silent and normal mode), plus the late-answer part of step 8 in a session with WELLNESS_ACTIVITY_WINDOW_S=0.

Changes from v1.0: steps 1 and 7 ("FAIL (set-up): no emergency contact saved on Ammi") now PASS after the contact was saved; the three "No emergency contact set" notices of Run 1 had three different event_ids, one per alert, which is **expected behaviour** (confirmed by Abdullah); the Ammi-phone steps are now done by Sarim on a second phone (no joint session needed).

2. Set-up

Item	Detail
Phones	Ali: Sarim's phone. Ammi (ammi4.test, Zainab Khan): Sarim's second Android phone (Samsung SM-G955F), signed in 7 Nov. Both on debug-apk-1.8.
Server	Hosted backend, normal timers in Run 2 (Primary 5 min, missed dose 30 min, wellness grace minimum 5 min, wellness activity window 30 min).
Schedule (Run 2)	Medicines ICP3 A 12:25 PM and ICP3 B 12:27 PM; wellness check 12:55 PM, grace 5 min. All switched off afterwards, with Abdullah's old TestMed (1:40 / 1:45 AM) and wellness check (1:25 AM).
Emergency contact	Uncle Hamid · +92 300 1110009 (saved 4 Nov).
Evidence	Screenshots below; GET /notifications as Ali (7 Nov, 12:35) for steps 4, 5 and 7. Render log of the MOCK SMS: requested from Abdullah.
Side note	Abdullah's TestMed doses were still on in the night of 6–7 Nov, so the server sent two mock SMS to Uncle Hamid (2:20 and 2:25 AM). Mock only; switched off 7 Nov.

3. Results by step

#	Step	Expected	Result	What happened	Shot
1	Ali's Home: no open alerts; emergency contact set	Nothing open; Uncle Hamid · 0300 1110009 saved on Ammi	PASS	Run 1: FAIL (set-up): no emergency contact saved on Ammi. Run 2: contact saved (4 Nov, 02:59), Ali's Open alerts cleared to 0 before the run	S1
2	Ammi holds PANIC	Ali, Sara and Bilal all get PANIC at once	Partial	Run 2: Panic 12:12:56; Ammi shows "We told 3 Guardian(s)". Ali sees it **only while the app is open and refreshes**: no push reaches any phone (F-16). Sara and Bilal phones not checked	S2
3	Ammi presses Panic twice quickly	Still one panic	PASS	Run 2: hold, then press again at once: Ali shows ONE Panic	—
4	Ali taps "I've seen it" within the timer	Alert moves to Seen; Ammi sees it was seen; no SMS	PASS	Run 1: sent 1:20:28, seen 1:21:30 (62 s, 60 s timer), no SMS-level notice. Run 2: seen 12:14:27; Ammi shows "Seen by a Guardian at 12:14 PM" (the screen refreshes every 15 s); no SMS	S3
5	Ammi: "I am safe now"	All-clear to everyone	PASS	Run 2: both phones cleared; server sent "Panic alert closed" at 12:20:50. Ali's app never shows it (F-12)	—
6	Wellness check; Ammi does not answer	Ali alerted (level 1) after the grace	PASS	Run 1: check 1:25, grace 5 min → "Wellness check missed" on Ali at 1:30	—
7	Unopened alert climbs to the emergency contact	ONE SMS to Uncle Hamid; Ali told "Emergency contact messaged"	PASS	Run 2 (normal timers): second Panic 12:22:02, nobody opened it → **"Emergency contact messaged": "Uncle Hamid was sent an SMS...", result: sent, 12:27:41 (5 min 39 s)**, same event; Ammi shows the contact is being reached. Proof: GET /notifications as Ali. Ali's app never shows the notice (F-12). Render log line: requested from Abdullah. Run 1 FAIL (set-up) replaced	S4, S5
8	Ammi answers the wellness check	Answer recorded; late answer closes an open alert + all-clear	Partial	Run 2: check 12:55 PM, grace 5: Ammi saw "Are you okay?" with a timer, answered, back to Home with a confirmation. The **late-answer-after-alert** path was not run: with normal settings Ammi's location counts as activity (needs WELLNESS_ACTIVITY_WINDOW_S=0 for a session)	—
9	Dose due: "I took it" → "Yes, confirm"	Dose = taken; no alert	PASS	Run 2: ICP3 A due 12:25, confirmed 12:28 → "ICP3 A is marked as taken"; no alert on Ali	S6
10	Next dose ignored	Missed-dose alert to Ali with "Give more time" / "Tell other Guardians"	PASS	Run 2: ICP3 B due 12:27 → "Missed dose" on Ali at **12:57** (30 min window). Tapping "I've seen it" opens the Missed dose screen with both buttons. "Give more time" → Ammi got a new confirm with a timer ("expires in 01:48"), confirmed. No message on Ali after the tap (F-17). Run 1: same alert at 1:41 / 1:46 with 60 s timers	S7, S8
11	Ali: Remote Alarm → Ring, then Stop	Ammi's phone rings even on silent; Stop works	FAIL	Run 2: Ali's button turns to "Stop alarm" (server alarm active), but **Ammi's phone never rang, on silent or normal mode**: no push is ever sent (F-16), and the app has no silent-mode bypass (F-13). Stop within 60 s works; after the 60 s the Stop button stays and does nothing (F-15); its label is hard to read (F-14)	S9
12	Sara tries Remote Alarm	403	Skipped	Covered by ICP-1 step 21	—

4. Findings

Codes continue the ICP series (F-01–F-09 in ICP-1). All found on **debug-apk-1.8**, hosted backend. Severity: **Critical** a safety function does not work; **High** a core safety flow is hidden or broken; **Medium** hurts a requirement; **Low** minor. Owner: frontend findings go to Talha, F-16 to Abdullah.

ID	Finding	Sev.	Step	Fix / owner	Status
F-16	**No real push notifications.** The server's only push sender is the mock (PUSH_PROVIDER = "mock", push_service.py: "Only 'mock' exists until Firebase is set up"). Notifications are saved but no phone ever gets one: the Remote Alarm never rings, a Guardian with the app closed is not woken by a Panic, messages give no notification, and an incoming call cannot ring. Confirmed on two phones: alarm and a text message produced nothing on Ammi; the message only showed inside the app	Critical	2, 11	Backend (Abdullah): real Firebase sender + Talha's service-account key (sds item 29). Blocks ICP-4 calls	Open
F-10	Every emergency-contact notice is titled "Emergency contact alert" whatever the result (sent / no contact / failed); the server's title and data.result are ignored. Run 1: no SMS went out and Ali could not tell	High	7	Frontend (Talha): show the server's title, or map data.result (EN + UR)	Open
F-13	The Remote Alarm cannot ring on silent: no silent-mode bypass or looping sound (declared scope cut in alarm_screen.dart). The alarm exists to find the Dependent when the phone is on silent	High	11	Frontend (Talha): play the alarm on the alarm audio stream / full-screen alarm until expires_at or remote_alarm_stop. Needs F-16 first	Open

ID	Finding	Sev.	Step	Fix / owner	Status
F-12	The Guardian app loads only **critical** notices (GET /notifications?priority=critical on Home and Alerts). Standard notices never appear anywhere: "Emergency contact messaged", "Panic alert closed", "Back online". Ali could not see that Uncle Hamid was messaged (12:27:41)	Medium	5, 7	Frontend (Talha): a notices list (or Seen tab) that includes standard notices	Open
F-14	"Stop alarm" label is dark red on a red button, nearly unreadable (safety control)	Medium	11	Frontend (Talha): white label on the red button (contrast ≥ 4.5 : 1)	Open
F-15	After the 60 s alarm ends, Ali's screen still shows "Stop alarm"; tapping it does nothing (server: no active alarm). Only leaving and reopening the screen shows "Ring alarm" again	Medium	11	Frontend (Talha): refresh at expires_at, and treat 409 NO_ACTIVE_ALARM as stopped	Open
F-11	Alerts list shows only the time, no date; older alerts look like today's	Low	—	Frontend (Talha): add the date for alerts not from today	Open
F-17	"Give more time" on the Missed dose screen gives no confirmation on Ali (it worked: Ammi got a new timer)	Low	10	Frontend (Talha): show "Ammi has until HH:MM" or a snackbar	Open
F-18	After "Seen by a Guardian", Ammi's Panic screen still says "If nobody answers within 5 minutes, your emergency contact is reached"	Low	4	Frontend (Talha): hide that line once seen	Open

4.1 Steps to reproduce F-16

- **Set-up:** Ammi signed in on a phone with notifications allowed; Ali signed in on another phone.
- **Steps:** Ali → Ammi → Emergency settings → "Ring alarm (60 s)"; or Ali sends Ammi a text message.
- **Actual:** nothing on Ammi's phone (no sound, no banner, nothing in the notification bar, normal or silent mode); the message only appears when Ammi opens the chat.
- **Expected:** a critical push that rings Ammi's phone (alarm), and a notification for the message.

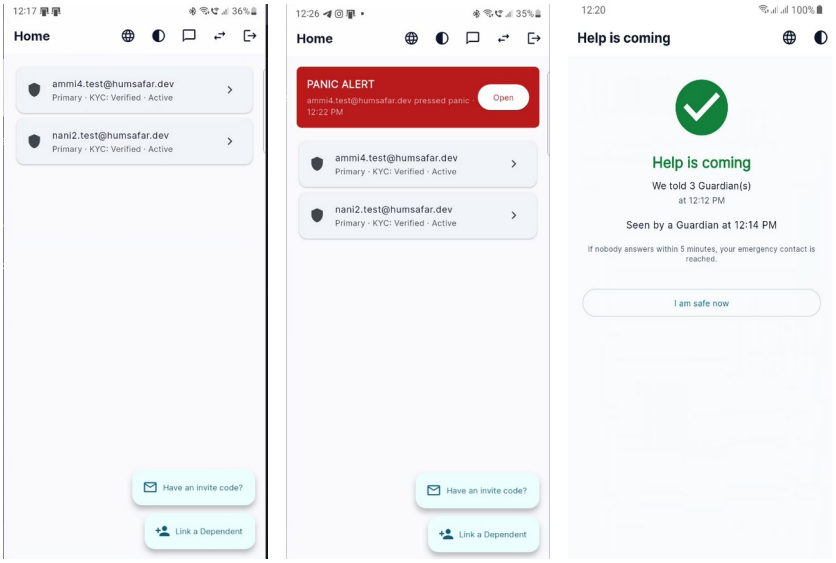

4.2 Seen again (already reported)

- **ICP-1 F-04 / 3.16 N-07:** Ali's Panic banner says "ammi4.test@humsafar.dev pressed panic": the email, not her name (the server's text has "Zainab Khan").

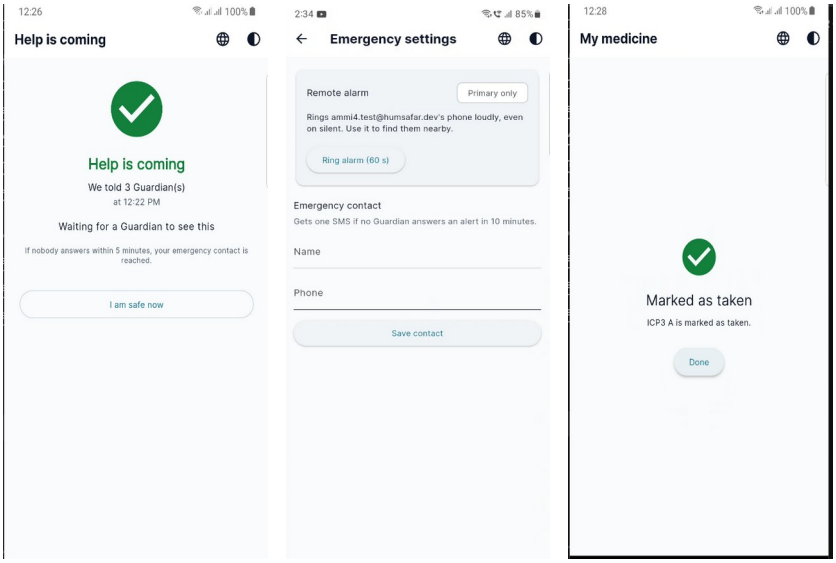

4.3 Not findings

- Ammi's Panic screen showed "Waiting" for up to 15 s after Ali tapped "I've seen it": it refreshes every 15 s by design, then showed "Seen by a Guardian at 12:14 PM".
- The Missed dose buttons appear after "I've seen it" on the alert, not by tapping the card: by design.
- Three "No emergency contact set" notices in Run 1: one per alert, expected (Abdullah, 4 Nov).

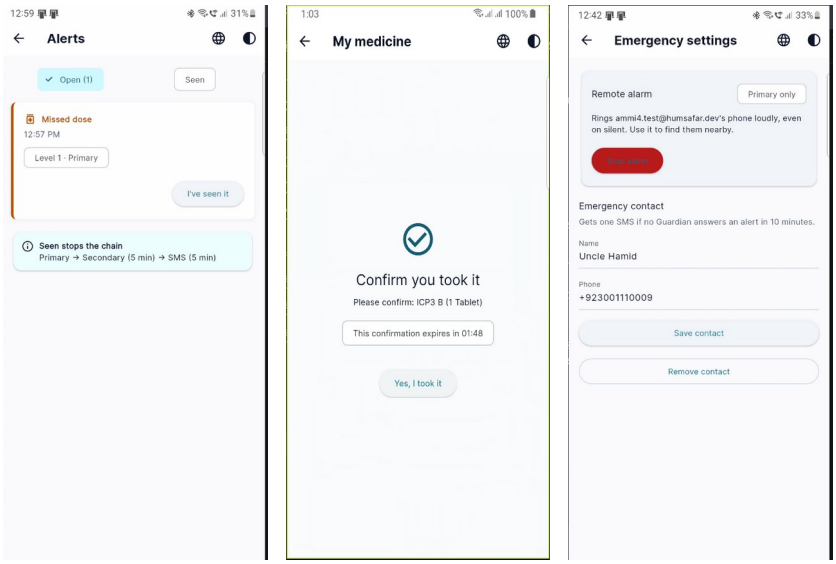

5. Screenshots (Run 2, 7 Nov)

S1 Ali clean · S2 Panic on Ali 12:22 · S3 Ammi: seen 12:14

S4 Unopened Panic · S5 Run 1: no contact · S6 ICP3 A taken

S7 Missed dose 12:57 · S8 More time on Ammi · S9 Stop alarm label
