HUMSAFAR · QA

Retest on debug-apk-1.9: Build Check (blocked)

v0.1 · prepared by Syed Sarim Jawad Zaidi (QA) · run 8 Nov 2026, 23:45 – 9 Nov 00:02 PKT on debug-apk-1.9, hosted backend · Ali on Sarim's phone, Ammi on his second Android phone

0	1 Critical	1 Low	Paused
checks run	F-22 build	F-21	until a rebuilt APK

1. Summary

The 1.9 retest could not start. After installing debug-apk-1.9 on both phones, neither Ali nor Ammi can log in: the app cannot reach the server at all (**F-22, Critical**). The hosted server itself is up (its /health page opens in the same phones' browser), so the fault is in the build, most likely a missing server address at build time. The error shown to the user is raw programming text (**F-21, Low**).

Nothing in Talha's 1.9 change list could be checked. The full retest (Blocks 0, A, B, C below) runs on the rebuilt APK and will be reported as **v1.0** of this report. This v0.1 records the blocker so the 1.9 build has its own report.

2. What was done

- Installed debug-apk-1.9 from the GitHub release on both phones (8 Nov, about 23:40). The app asked both accounts to sign in again.
- **Ali** (ali.test): Login → the error in section 5 (screenshot).
- **Ammi** (ammi4.test) on the second phone: same error.
- Opened https://humsafar-api-s851.onrender.com/health in the phone browser: the server answered **ok** (9 Nov 00:02).

3. Findings

Found on **debug-apk-1.9**. Owner: Frontend (Talha). F-21 and F-22 continue the ICP / general series (F-20 was the last).

ID	Finding	Sev.	Fix / owner	Status
F-22	debug-apk-1.9 cannot reach the server on any phone. Login fails at once with "The request connection took longer than 0:00:00.000000 and it was aborted … connectTimeout …". Same on Ali's phone and Ammi's phone; the hosted server answers /health in the same phones' browser. lib/core/network/api_config.dart (same in 1.8 and 1.9) falls back to http://10.0.2.2:8000 (Android emulator) when API_BASE_URL is not given at build time, so 1.9 was most likely built without --dart-define=API_BASE_URL=https://humsafar-api-s851.onrender.com	Critical	Rebuild the APK with the hosted address (e.g. 1.9.1) (Talha); optionally make the release build fail if API_BASE_URL is missing	Open
F-21	When the server cannot be reached the app shows the raw Dio exception text ("…try raising the RequestOptions.connectTimeout above the duration of 0:00:00.000000 or improve the response time of the server") instead of a plain message	Low	Show "Can't reach the server. Check your internet and try again." (Urdu too) (Talha)	Open

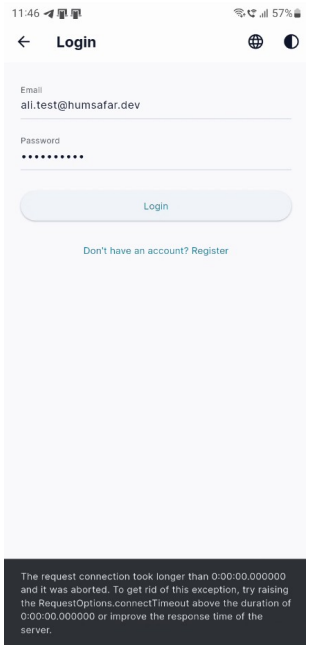

3.1 F-22: steps to reproduce

- Install debug-apk-1.9 on a real Android phone with working internet.
- Log in with any existing account. **Actual:** the error appears at once and nothing loads. **Expected:** sign-in against the hosted server, as on 1.8.

4. Not run (blocked by F-22)

Checks	Why
Block 0: set-up (Retest dose, unopened Panic)	Needs a signed-in Guardian and Dependent
Block A: Ali's phone: F-08, F-19, G-03, G-04, P-01, P-02, P-03, P-05, P-06, P-07, N-15, N-07, F-11, F-10, F-12	Cannot sign in
Block B: Ammi's phone: N-02, N-03, N-05, N-06, N-10, N-11, N-12, N-14, F-18, F-19	Cannot sign in
Block C: alarm: F-13, F-14, F-15, F-17, F-20	Cannot sign in
