Accessibility — QA Test Cases

Task 3.16 · v0.1 (written ahead) · Owner: Syed Sarim Jawad Zaidi · Based on SRS v1.0 FR-P1, FR-P2, FR-P4, NFR-07, NFR-08, NFR-09, the 3.9 mockups (20–24) and the NFR-08 contrast check v1.0

Purpose: prove that an elderly Dependent can use the three safety-critical actions (Panic, Wellness check, Medicine) quickly and safely: within 2 taps from the home screen (NFR-07), readable in Large text / High-contrast mode at WCAG AA contrast (NFR-08), with big touch targets (FR-P1), and fully in Urdu (FR-P4, NFR-09). Also covers the accessibility checks that were BLOCKED in the 2.9 Phase 1 QA pass. Results go on a copy of the QA Checklist template.

Status: written before Talha's 3.11–3.13 exist. Run when the Panic, Wellness check and Medicine screens are built; screen 20 (home) can already be checked now.

1. Test setup

1.1 Test accounts

Role	Name in tests	Set-up
Dependent	Ammi	Registered, KYC verified, linked to Ali.
Primary Guardian	Ali	Phone + CNIC verified.
Secondary A	Sara	Invited by Ali, verified. Not needed for most cases.
Secondary B	Bilal	Invited by Ali, verified. Not needed.
Outsider	Zain	A verified Guardian NOT linked to Ammi (for refusal checks).

1.2 How to run

- **Device:** a real Android phone if possible (an emulator is fine for layout); install Google's free Accessibility Scanner app for contrast and touch-target checks.
- **Count taps honestly:** a tap or a press-and-hold on one button = 1 tap. Scrolling or opening a menu also counts.
- **Two modes:** run sections B and C twice: Large text / High-contrast OFF, then ON (Aa button).
- **Urdu:** section D in Urdu (EN|UR button), with Large text ON.

2. Test cases

A. Two taps for each safety action (NFR-07, FR-P1)

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
A-01	NFR-07, FR-D2	Ammi on Home (20).	Send Panic: tap PANIC, then press and hold HOLD for 2 s (21).	Panic sent in 2 taps; "Help is coming" (21b) shows; all Guardians alerted.		
A-02	FR-D2	Ammi on Panic (21).	Tap HOLD briefly (under 2 s); tap Cancel.	No alert is sent (accidental-press protection); Cancel returns Home.		

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
A-03	NFR-07, FR-D4	A wellness check is due.	From Home: tap I am OK, then Yes, I am OK (22). Also from the prompt / notification: tap Yes, I am OK.	Confirmed in 2 taps from Home and 1 tap from the prompt; Guardian sees it answered.		
A-04	NFR-07, FR-F1	A dose is due.	From Home: count every tap until the dose shows Taken (My medicine → I took it (23) → Yes, confirm (23b)).	Must be 2 taps or fewer. Known risk: the 3.9 mockup flow is 3 taps (button on Home + two-step confirm). Fail it if the build needs 3; see open point 1.		
A-05	FR-F1	Dose due, from the reminder notification.	Tap the notification → I took it → Yes, confirm.	Two-step confirm still required (FR-F1); a single tap never marks a dose taken.		
A-06	FR-D4	Wellness prompt open.	Tap I need help (22).	Opens Panic (21), not a sent alert straight away.		
A-07	FR-P1	—	On 20–24, look for menus, scrolling or small links needed for the safety actions.	None needed: each safety action is a big button on screen without scrolling.		

B. Large text and contrast (FR-P2, NFR-08)

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
B-01	FR-P2	Large text OFF.	Tap Aa on Home (20), then open 21, 22, 23, 23b, 24.	Text gets clearly bigger on every screen; nothing cut off, overlapping or pushed off-screen; no sideways scrolling.		
B-02	FR-P2	Large text ON.	Close the app fully and reopen.	Still ON (setting remembered).		
B-03	NFR-08	Accessibility Scanner installed.	Scan 20, 21, 22, 23, 23b, 24 with Large text OFF and ON.	No contrast warnings: at least 4.5 : 1 for normal text, 3 : 1 for large text.		
B-04	NFR-08	—	Check the small line under PANIC ("Press for help") on 20.	At least 4.5 : 1. Known: 3.12 : 1 in build 55ab1d6 (white70 on red); passes with white text or red #B91C1C (style guide v0.2).		
B-05	FR-P2	Phone font size set to the largest in Android settings, app Large text ON.	Open 20–24.	Still usable: buttons readable and tappable; record anything cut off as High.		
B-06	NFR-08	—	Look at status messages (time left, Step 1 of 2, Taken).	Meaning never by colour alone: each has words or an icon too.		
B-07	Design	—	Check colours on 20–24 against the style guide v0.2.	Teal #0E7490 for actions, red only for Panic; no red for ordinary errors on Dependent screens.		

C. Touch targets and layout (FR-P1)

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
C-01	FR-P1	Accessibility Scanner.	Scan 20–24.	Every tappable item at least 48 × 48 dp; no "touch target" warnings.		
C-02	FR-P1	—	Measure PANIC on 20 and HOLD on 21.	Full width; PANIC at least 160 dp tall (mockup 200); HOLD at least 200 dp wide.		

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
C-03	FR-P1	Large text ON.	Tap I am OK and My medicine 10 times each with a thumb, quickly.	No mis-taps onto PANIC or a neighbouring button.		
C-04	FR-P1	—	Hold the phone in one hand; reach each safety button with the thumb.	All safety buttons reachable without changing grip (note any that are not).		

D. Urdu on the safety screens (FR-P4, NFR-09)

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
D-01	NFR-09	EN|UR switched to Urdu.	Open 20, 21, 21b, 22, 23, 23b, 24.	Every word in Urdu; no English left (except numbers and the drug name).		
D-02	FR-P4	Urdu ON.	Check direction and alignment.	Right-to-left layout; icons and Back arrow mirrored where expected; times and numbers readable.		
D-03	FR-P2, P4	Urdu ON + Large text ON.	Open 20–24.	Urdu text not cut off (Urdu words are taller); buttons still fit.		
D-04	NFR-09	Urdu ON.	Compare button words with the UI text sheet (docs/design/ui_text).	Same wording as the sheet; any difference noted for the Urdu review.		

E. Screen reader (best practice)

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
E-01	Best practice	TalkBack ON.	On 20, swipe through the screen.	Reads the greeting, then "Panic, button, press for help", then I am OK and My medicine with their next times.		
E-02	Best practice	TalkBack ON.	Send Panic on 21 with TalkBack.	Possible with TalkBack gestures; the 2 s hold is announced.		

F. Guardian side and checks moved from 2.9

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
F-01	Convention	—	Open every built screen in both apps.	Aa and EN|UR in every app bar (except the dev-only role select).		
F-02	NFR-08	Accessibility Scanner.	Scan Guardian Home (07) and Alerts (08) with a Panic alert open.	No contrast warnings; Panic banner text readable.		
F-03	2.9 Sec. B	—	Re-run the 6 accessibility checks marked BLOCKED in the Phase 1 results (2.9).	Each now PASS or FAIL with a note; none left BLOCKED.		

3. Open points

- Medicine in 2 taps (A-04): the SRS asks for a two-step confirmation (FR-F1) AND for each safety action within 2 taps from Home (NFR-07). The 3.9 flow (Home button → I took it → Yes, confirm) is 3 taps. Suggested design fix: when a dose is due, the My medicine button on Home acts as step 1 ("I took it") and opens the confirm step (23b) directly — 2 taps. Screen 20 will be updated (v0.2).
- Panic press-and-hold 2 s (21) counts as one tap; it is still an open design point from 3.9 and must be agreed with the team before ICP-3.
- Known build notes from the NFR-08 check (Panic subtitle 3.12 : 1) are recorded in the Full Task List; expect B-04 to fail until fixed.
