Records, Vitals and Band — QA Test Cases

Task 5.10 · v0.1 (draft) · Owner: Syed Sarim Jawad Zaidi · Based on SRS v1.0 FR-G1–G4, FR-H1, FR-H2, FR-N2, FR-N3 and the 5.9 mockups

Purpose: prove that records can be added, viewed and exported by the right people only, that appointments remind both sides, that vitals are recorded and shown correctly, and that the band adds data without ever blocking the app. Results go on a copy of the QA Checklist template.

Status: written BEFORE the Phase 5 API contracts existed. Endpoint names, limits and error codes in [brackets] are placeholders. Re-check against Abdullah's records / vitals / wearable contracts when they land and publish v1.0.

1. Test setup

1.1 Test accounts

Role	Name in tests	Set-up
Dependent	Ammi	Registered, KYC verified, linked to Ali.
Primary Guardian	Ali	Phone + CNIC verified.
Secondary A	Sara	Invited by Ali, verified. Permission Health Records = ON.
Secondary B	Bilal	Invited by Ali, verified. Health Records OFF.
Outsider	Zain	A verified Guardian NOT linked to Ammi (for refusal checks).

1.2 How to run

- **Order:** backend checks through Postman as soon as Abdullah's 5.1–5.4 are merged; app checks after Talha's 5.6–5.8.
- **Test files:** one small PDF lab report, one phone photo of a prescription, one X-ray image, one non-medical file (e.g. .exe or .zip) and one very large file.
- **Band:** use mocked band data first (roadmap 5.4); repeat section D with the real band after 5.5.

2. Test cases

A. Medical vault (FR-G1, FR-G2, FR-G3)

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
R-01	FR-G1	Ali logged in.	Medical Vault → Add record → Lab report, title "HbA1c", date, upload the PDF → Save.	Record appears in the list (15) with type, date and "added by Ali"; filter Lab shows it.		
R-02	FR-G1	Ammi logged in.	My health → My records → add a prescription photo with the camera.	Saved with "added by Ammi"; Ali sees it too.		
R-03	FR-A4	Sara ON, Bilal OFF.	Both open Ammi's vault.	Sara sees the records; Bilal is refused [403 MODULE_ACCESS_DENIED] and the Vault entry is hidden.		

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
R-04	FR-G2	Sara ON.	Ali → Record access (15e) → Sara: only Lab reports ON. Sara opens the vault, then opens a prescription by its link/id.	Sara's list shows Lab reports only; opening the prescription directly is refused.		
R-05	FR-G1	—	Upload the .exe/.zip file and the very large file.	Both rejected with a clear message [limits TBD]; nothing saved.		
R-06	FR-G1	At least 6 records over 2 years.	Export → Complete history → Make PDF.	PDF opens; every record listed, oldest to newest (or as agreed), with type, title, date and who added it.		
R-07	FR-G1	Same.	Export One year (2026) and One month (Oct 2026); then a month with no records.	Only that period included. Empty month: clear "nothing to export" message, not a blank PDF.		
R-08	FR-H1	Some vitals entered.	Export with "Add vitals report" ticked; then Export vitals PDF on its own (26).	Combined PDF has a vitals section; the vitals-only PDF also works.		
R-09	FR-G3	Optional feature built.	Create read-only doctor link; open it in a private browser; try to change anything; wait past expiry [use a short expiry for the test].	Opens without login, read only; after expiry the link no longer works.		
R-10	FR-N3	Records viewed in R-01 – R-04.	Ali opens the audit log [screen / endpoint TBD].	Each record view is logged with who, what, which record and when.		
R-11	FR-N2	—	Ask Abdullah how records are encrypted at rest; check one stored file is not readable directly.	*[Method to confirm with Abdullah]*		

B. Appointments (FR-G4)

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
AP-01	FR-G4	Ali logged in.	Appointments → Add: Dr. Hamid, a time 10 min from now [short reminder for the test].	Shows as Next (15d) and on Ammi's My health (28); BOTH Ali and Ammi get the reminder.		
AP-02	FR-G4	AP-01 saved.	Change the time; then delete it.	Reminder moves with the new time; after delete no reminder arrives.		
AP-03	FR-G4	An appointment in the past.	Open Appointments.	Past one is no longer "Next"; the following one moves up.		

C. Vitals (FR-H1)

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
H-01	FR-H1	Ammi logged in.	My health → Add my blood pressure → 138 / 88 → Save.	Saved as manual, by Ammi, with time; Ali's Vitals (26) shows 138/88.		
H-02	FR-H1	Ali logged in.	Add reading (26b) → Blood sugar 112, SpO2 97, Temperature 98.4.	All saved, attributed to Ali; tiles update.		
H-03	FR-H1	—	Enter BP 400/20, SpO2 120 %, temperature 150, an empty value.	Each rejected with a clear message [valid ranges TBD].		

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
H-04	FR-H1	Readings on 7 different days.	Vitals → 7 days, then 30 days.	Chart points match the readings and dates; no missing or extra points.		
H-05	FR-H1	—	Look for any "blood pressure from band" option.	None: blood pressure is always typed in by hand.		

D. Wearable band (FR-H2, NFR-13)

ID	Req.	Precondition	Steps	Expected result	Result	Notes / Bug
W-01	FR-H2	Band on and near Ammi's phone.	My band → Connect band (27b) → pick the band → Connect.	Paired; My band (27) shows Connected and last sync time.		
W-02	FR-H2	Paired.	Wait for a sync (or tap Sync now).	Heart rate and steps appear, marked Band; Guardian tile shows "Band · x min ago". Band battery is NOT in the app (3 LEDs on the band, team decision); check the LEDs by eye.		
W-03	FR-H2, NFR-13	Paired.	Switch the band off / walk out of range; use the app (Panic page, medicine, messages).	Everything else works; band status turns grey "Not connected · last sync …"; it reconnects by itself when back [time TBD].		
W-04	FR-H2	Paired.	Send a very high or very low heart rate from the mock data.	Shown, but no alarm or escalation starts from band data alone.		
W-05	Security	A second band nearby.	Try to pair Ammi's phone with a band that is not hers; check the app ignores data from an unexpected device.	Only the paired band's data is accepted (SDS: BLE bonding, no unexpected device address).		

3. Open points

- All [bracketed] values wait for the Phase 5 contracts (record types, file size limit, vital ranges, reminder times, audit screen).
- Band: custom ESP32 build by a local maker (sensor list to confirm); section D runs on mock data until the band arrives. Band battery is shown only by 3 LEDs on the band.
- FR-G3 doctor link is Optional; mark R-09 N/A if it is not built.
